Circular and semi-circular displacement outlet

Preliminary remarks

The circular displacement outlet is installed free standing in the room or - preferably the semicircular model - placed in front of a wall or pillar on the floor.

The following criteria must be accounted for in the layout:

- Distance between outlet and workplace or seating (near zone)
- Air outlet volume flow rate
- Discharge velocity
- Possible size
- Temperature difference between supply air and indoor air

Our publication DS 4069 gives a general description of displacement ventilation with the calculation method for temperature gradients and cooling capacity. It also explains layout specifications for the near zone depending on outlet placement.

The discharge velocity should always keep below 0.25 m/s. This is assured by keeping under the maximum volume flow rates specified in the table. The requisite near zone and the displacement outlet dimensions must be observed.

Construction design and function

The main components of the displacement outlet are the housing **1** with finely perforated sheet metal casing **2** and the connection spigot **3**.

The finely perforated sheet metal casing **2** generates a low-turbulence, a radial or semi-radial displacement flow to ensure the typical displacement ventilation jet pattern. The supply air spreads at about 10 to 30 cm above the floor at very low velocity.

There are three types:

Type Q-ZL: Circular displacement outlet with guidance device

Air is distributed through a built-in guidance device that directs the discharged supply air jets at a slight upward incline and stabilizes them. This diminishes a fast cold air drop and the attendant rise in air velocity near the air outlet.

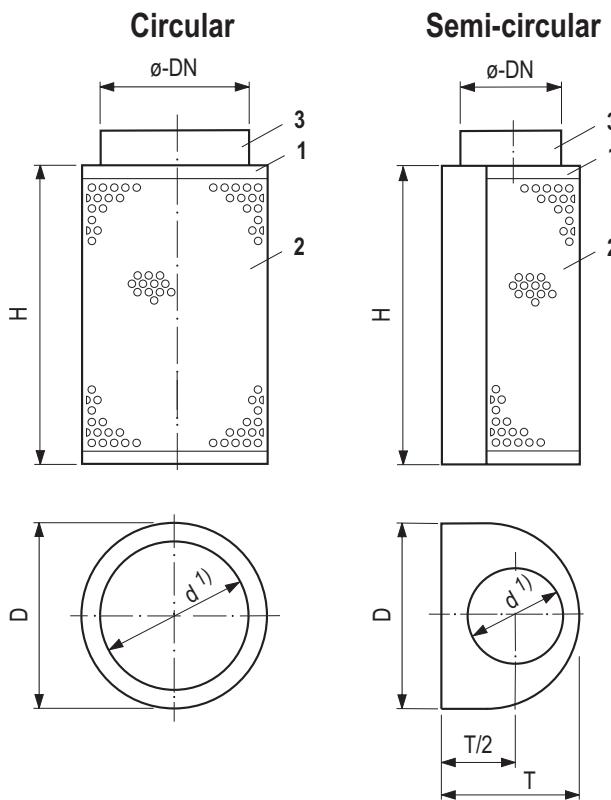

The supply air flows into the air outlet via a connection spigot from above.

Type Q-ZM: Circular displacement outlet with air distribution mat

Type Q-ZH: Semi-circular displacement outlet with air distribution mat

An air distribution mat behind the finely perforated sheet distributes the air. The mat generates an even, straight flow. The sheet metal casing is easy to open to replace the air distribution mat. The air is supplied from above or below through the connection spigot.

Dimensions, volume flow rates, weights

Circular and semi-circular outlet, main dimensions

Other dimensions on request									

1) Connection diameter-d = DN - 1;

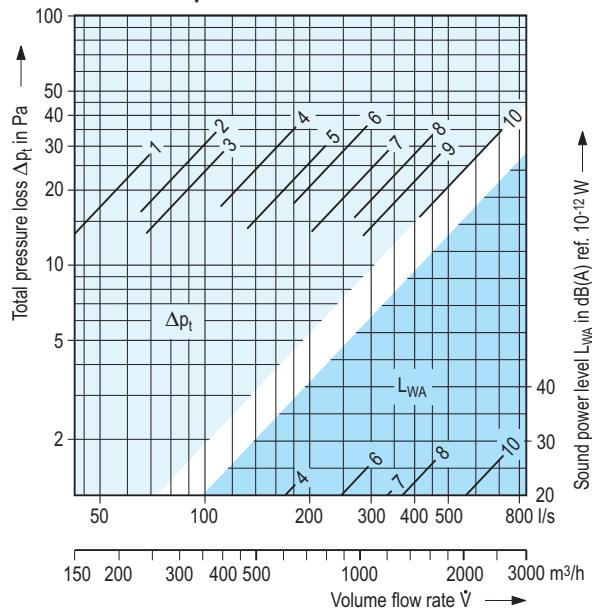

3) for $u_0 = 0.15$ or 0.25 m/s

Circular and semi-circular displacement outlet

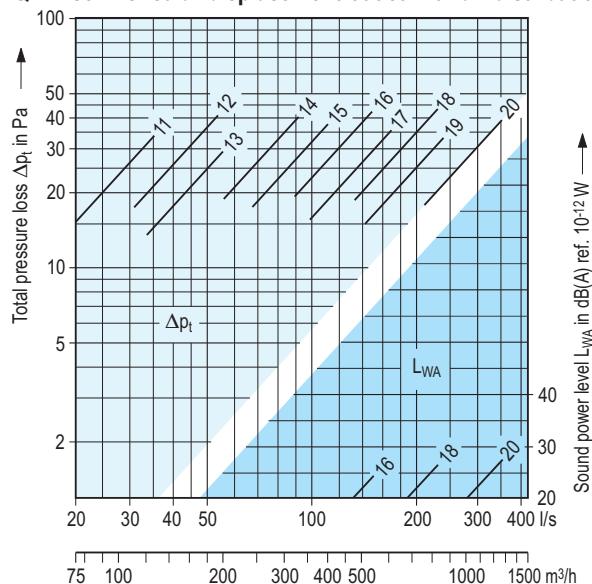

Q-ZL circular displacement outlet with guidance device

Q-ZM circular displacement outlet with air distribution mat

Q-ZH semi-circular displacement outlet with air distribution mat

Sound power level and pressure loss

Sound power level and pressure loss by air volume flow rate can be read off the following charts.

For better adjustment of the Q-ZL circular displacement outlet, the otherwise very low pressure loss has been raised by means of an additional built-in fixed damper. This also raises the sound power level. Where a lower sound power level than specified in the chart for Q-ZL is required, the air outlet is also available without a fixed damper on request.

Size serial no. Circular Q-ZL	Size serial no. Circular Q-ZM	Size DN mm	D mm	H mm	T mm

* Sound power level ≤ 20 dB(A) ref. $10^{-12} W$

Features

- Draught-free fresh air supply to occupied zone
- Very small near zone to air outlet
- Large coverage (5 to 10 m)
- Low sound power level
- Temperature difference between supply air and indoor air usually -2 to -3 K and between supply air and exhaust air up to about -12 K, depending on room height and volume flow rate
- Freestanding in room or in front of a wall
- Connection spigot above or below, depending on type
- Visually attractive design
- Made of sheet steel, painted in desired colour
- Available in many sizes
- Type Q-ZL with built-in guidance device, maintenance-free
- Type Q-ZM and Q-ZH with built-in air distribution mat, easy to maintain by simple opening of finely perforated sheet

Circular and semi-circular displacement outlet

Semi-circular placed in front of a pillar

Function / kind

ZL = circular (cylindrical) with guidance device
 ZM = circular with air distribution mat
 ZH = semi-circular with air distribution mat

Size

Model: circular DN 200 to DN 500
 Model: semicircular DN 125 to DN 315

Subject to technical alterations!

1) available for Q-ZM and Q-ZH

Tender text

..... unit

Circular displacement outlet for floor installation,
 for extremely low-turbulence displacement flow and large
 penetration depth in commercial rooms,

Model:

- Circular, best placed freestanding in room,
 Air distribution via built-in
 guidance device,
- air distribution mat; air outlet housing easy to open
 for maintenance of the air distribution mat,
- semi-circular, best positioned in front of walls and
 pillars, air distribution via integrated distribution mat; air
 outlet housing easy to open for maintenance of the air
 distribution mat,

made up of:

sheet steel housing, finely perforated sheet casing and
 built-in air distribution devices.

Connection spigot to fit DIN 24 145 pipes (folded spiral-seam tube) or DIN 24 146 (flexible tubes),
 Position above. below.¹⁾

Technical data:

Supply air volume flow rate: l/s (m^3/h)

Adm. sound power level: dB(A) ref. 10^{-12} W

Material: galvanized steel

Quality paint, colour: RAL

Size and nominal diameter
 of connection spigot: DN

Casing diameter: mm

Height: mm

Make: KRANTZ KOMPONENTEN

Type: Q - Z__ – DN _____
